

SLIME INSTRUCTIONS

**For the Children who Missed it at our
Summer Reading Program Kickoff!**

Mix 1 teaspoon of borax in 1 cup of water. Stir to dissolve the borax. In a separate container, mix 1/2 cup of glue (1 bottle) in 1/2 cup of water. You can add food coloring, if you like. When you mix the two solutions together, crosslinks will form between the molecules, forming the gelatinous polymer we call slime.

Storing the Slime

The slime is non-toxic and can be cleaned from surfaces using soap and water. You can store the slime in a plastic baggie to keep it from drying out.
